We are able to configure floating filter curtains with skirts constructed from mesh products with an opening size range from 0.4mm to 100mmx100mm. The mesh size will be dependant upon the material to be contained or controlled.

Float assemblies are available from 100mm square block to 500mm diameter VVH polystyrene log.

Lengths supplied are 10m, 15m or 20m with skirt depths to 30m

For more information on these products:

Email: products@mentanzapl.com

The most common product supplied in this class are our noxious weed control booms. Over 20km of this cost effective management system has been produced.

General Specification:

Float: Closed cell PE Block 100mmx100mm

Skirt: 500mm x400micron mesh

Ballast: 6mm galvanised chain

Joining: ASTM on float skirt shackled and laced
